A clearer plan for venue experiences

OUR EXPERIENCE

From organizing events ourselves, we have seen a lack of experiences that surprise attendees. We want to help teams plan 3D and AR experiences and communicate those plans more clearly.

PRODUCT HYPOTHESIS

An operator will delegate a venue task if each purchase has a limit and a receipt.

Budget controls are our testable experiment.

One mandate becomes one visible result

01	02	03	04	05
Operator	**Venue agent**	**Stage agent**	**Paid services**	**Venue screen**
Objective + budget	Allocates the budget	Chooses the services	Schedule + screen card	Morning briefing

0.50 USDC (testnet)

Treasury allowance

0.20 USDC (testnet)

Agent draw for its allocation

The operator sets a 0.10 USDC (testnet) per-call cap.

View the recorded run

A paid card, a receipt and a refused call

OPERATOR DASHBOARD

ON-CHAIN BUDGET CEILING · ENFORCED BY STELLAR

Approved by the operator's treasury	Drawn by venue-agent for its allocations	Left on the allowance	Draw above what is left · simulation
0.5 USDC · approve tx	0.2 USDC · transfer_from tx	0.3 USDC · expires at ledger 5408128	0.31 USDC · ⛔ rejected in simulation · not submitted

SEP-41 allowance on the USDC Stellar Asset Contract (CBIELTK6YBZJU5UP2WWQEUCYKLPU6AUNZ2BQ4WWFEIE3USCIHMXQDAMA). The network enforces this ceiling and its expiry, whatever the agent's code does; the per-call cap below is the agent's own, stricter rule.

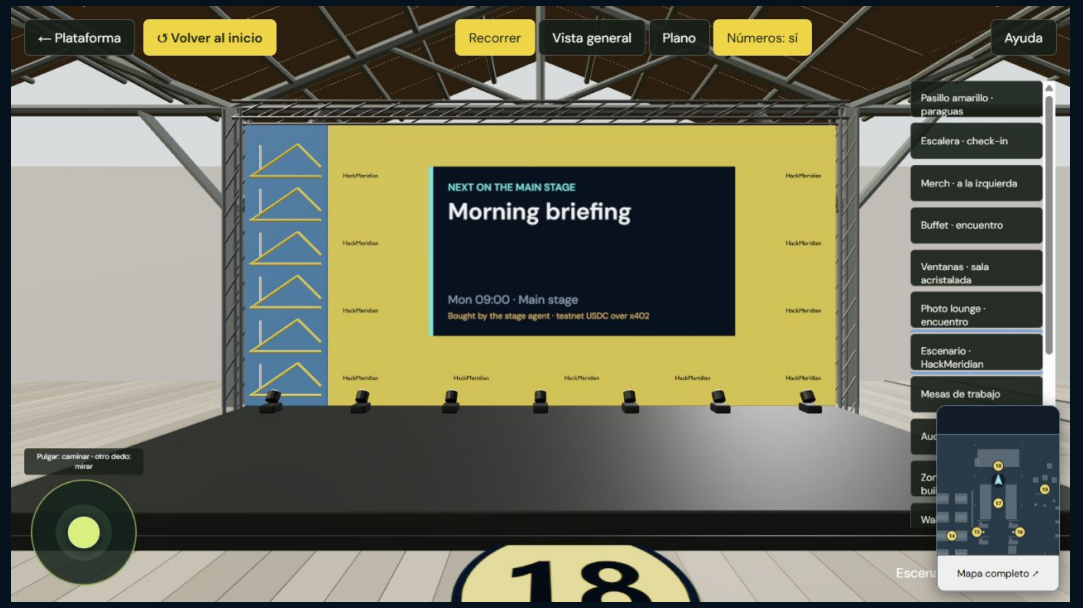

LEDGER · EVERY ATTEMPT

Agent	Service	Price	Status	Proof
venue-agent	budget draw · USDC allowance (SEP-41)	0.2 USDC	✓ settled	tx 914076fb…
venue-agent	budget draw · USDC allowance (SEP-41)	0.31 USDC	⛔ blocked — Rejected during simulation; not submitted to Stellar.	—
stage-agent	venue-feed	0.01 USDC	✓ settled	tx bb6d3dfb…
stage-agent	screen-card	0.05 USDC	✓ settled	tx 7d3e29ff…
stage-agent	premium-render	0.25 USDC	⛔ blocked — Per-call cap exceeded; blocked before signing.	—

Needs operator approval

stage-agent wanted **premium-render** for 0.25 USDC.
Refused before anything was signed: price above the per-call cap.

ONE16 TWIN

0.01 USDC (testnet) + 0.05 USDC (testnet) settled. 0.25 USDC (testnet) blocked.

Recorded Stellar testnet run: 26 Oct 2026, 01:23 UTC

`7d3e29ff665156095f1443838e0cf1ba0164dfbc536ae24f9546ec1f3ee7d3b0`

Two controls limit the agent's spend

STELLAR CONTRACT

SEP-41 allowance

Treasury approves 0.50 USDC (testnet). The agent draws 0.20 USDC (testnet).

A further 0.31 USDC (testnet) draw fails network simulation.

AGENT POLICY LEDGER

Checks before signing

Per-call cap: 0.10 USDC (testnet). An allowed service must also fit its allocation.

Premium render: 0.25 USDC (testnet), blocked before any signature.

x402 composes paid APIs with Stellar USDC. The agent signs Soroban authorization. The facilitator pays network fees and settles each purchase.

Recorded testnet evidence and reproduction steps

Events first. Permanent spaces next

FIRST CUSTOMER

The event organizer or venue operator

Proposed first pilot: One Sixteen (ONE16), Lisbon. No agreement signed.

BUSINESS MODEL HYPOTHESIS

A per-event mandate and a margin on purchased services.

Operators set the rules and see what every payment bought.

Then: monthly mandates for campuses, museums and innovation districts.

Built during HackMeridian. Next: a pilot

BUILT AT THE EVENT

Site and ONE16 twin

x402 agent loop and paid services

SEP-41 ceiling, policy ledger and dashboard

Stage screen and reproducible CI run

Built by our team during HackMeridian 2026

AI tooling: Claude, Codex and Dot.

Our team chose the problem, scope and design.

NEXT

Operator approvals

Cumulative spending policies

More zones and paid placements

Physical AR placement remains unverified.
